RAKESH ROSHAN RATH

Software Development Engineer | Java Spring Boot Developer

rathpintu90@gmail.com | +91-7978021156 | Bengaluru, India | LinkedIn | LeetCode

SUMMARY

Software Development Engineer with 1.3+ years of experience building high-performance backend microservices, gRPC, and RESTful APIs with Java, Spring Boot, and FastAPI, paired with React. Strong foundation in DSA, LLD, and CI/CD pipelines, optimizing transactional throughput and database latency. Experienced across full lifecycle unit, integration, UI, and load testing via JUnit, Mockito, TestNG, Selenium, and JMeter.

WORK EXPERIENCE

Coforge – Software Development Engineer | Sabre Account

June 2025 – Present | Bengaluru, India

- Engineered and deployed core travel distribution microservices using Java and Spring Boot, building end-to-end RESTful APIs for automated Passenger Name Record (PNR) creation and lifecycle management across high-concurrency reservation workflows.
- Architected a file reconciliation pipeline comparing 100K–200K+ payloads between legacy GDS/PSS and modern open systems, streaming validated batch records directly into Google BigQuery.
- Built an internal Jira analytics dashboard using Java, Spring Boot, and REST APIs with multi-tenant filtering (team/product-wise) and reporting engines, cutting team sprint overhead by 35%.
- Modernized enterprise automation infrastructure to current Sabre engineering standards by refactoring legacy suites into a modular, object-oriented test framework using Java, TestNG, Selenium, and Postman, extending framework capabilities for 20+ distributed developers and QA engineers.
- Engineered robust E2E validation & contract test suites using JUnit 5, Mockito, and JMeter, boosting code coverage from 62% to 88% and catching regression bugs early to prevent production escapes on critical distribution pathways.
- Optimized backend data pipelines and database transaction queries, reducing data retrieval latency by 38% across high-throughput endpoints processing 100K+ daily event payloads.
- Automated CI/CD build, containerization, and release pipelines using Jenkins and Docker, cutting deployment turnaround time from 4 hours to 45 minutes across 8 cross-functional delivery squads.

PROJECTS

Enterprise School Management Platform | Spring Boot, WebFlux, React, Resilience4j, Eureka

- Architected a reactive microservices platform with a React , Eureka discovery, JWT, Spring Cloud Gateway, and Resilience4j/WebFlux handling 1,500+ concurrent requests with sub-60ms latency.
- Engineered comprehensive unit, integration, and API contract test suites using JUnit 5, Mockito, and Postman, achieving 85%+ test coverage while benchmarking system throughput and connection pooling limits via JMeter.

Polyglot Real-Time Analytics Engine | Java, Spring Boot, FastAPI, gRPC, Redis, Docker

- Architected a polyglot microservice engine bridging a Spring Boot transactional service with a high-throughput FastAPI worker via gRPC (HTTP/2 Protobuf) and Redis, cutting inter-service latency by 45% over standard REST.
- Containerized multi-service workflows using Docker Compose and automated validation test suites in Postman and JUnit 5, verifying connection limits under 2,000+ RPS using JMeter.

EDUCATION

Gandhi Institute for Technological Advancement, Bhubaneswar, Odisha

Bachelor of Technology in Computer Science & Information Technology | CGPA: 9.10 | 2021 – 2025

SKILLS

- **Languages:** Java (8/11/17+), Python, JavaScript, SQL
- **Backend & Web Frameworks:** Spring Boot, FastAPI, React, gRPC, REST APIs
- **Testing & Quality Assurance:** JUnit 5, Mockito, Spring Testing, TestNG, Selenium, Postman, JMeter
- **Databases & Caching:** PostgreSQL, MongoDB, Redis
- **DevOps & Developer Tools:** Git, Maven, Docker, Jenkins, CI/CD Pipelines
- **Core Competencies:** Data Structure and Algorithms, Object-Oriented Design (LLD), Concurrency, MVC, SOLID Principles, Multithreading
